

ABSTRACT

A dispenser for solid rolls of web material, includes a frame, a cover connectable to the frame, to together with the frame define a volume for storing a roll of web material from which web material can be dispensed, a frame roll support projection, and a cover roll support projection, the two roll support projections being arranged to enable rotatably engaging the roll of web material in or near its rotational axis, an outlet opening in the dispenser, to enable web material to be withdrawn from the dispenser, where at least one of the frame or cover roll support projections is rotatably mounted in a bearing.
